Abstract (en)

[origin: WO03030322A1] The invention relates to a base for a control box comprising four corner elements (1) which are interconnected by means of two parallel longitudinal panels (6, 7) and two parallel transversal elements (13, 14). At least one transversal element (14) is embodied as a profiled rail which extends between the lower and/or upper sections of two adjacent corner elements (1) and comprises tracks of punched holes. Said rail comprises end sections (20, 21) which extend on both sides on the outer surface and in the inner space of the corner elements.
