Abstract (en)

[origin: EP1430951A1] The circulatory mill unit for the compression reduction of a granular material has a rotatably mounted material feed ring (16) in the upper region of which is a material stripping device which has at least one wheel (33a,33b) as a co-rotating braking wheel which in the region of the upper apex point of the rotating feed ring is pressed against the material (30). The wheel is driven by the material feed ring over the material and in relation to it is reducible in its circumferential speed.
