Abstract (en)
In a reed for weaving in which a plurality of reed dents (22) each having a dented portion for guiding the weft are arranged such that the dented portions (24) are communicated to each other to form a guide groove for the weft, the dimension between the upper and lower faces of the dented portions (24) of the plurality of reed dents (22) located at the end portion on the downstream side in the weft inserting direction are made smaller than the dimension between the upper and lower faces of the dented portions (24) of the reed dents (22) located in an intermediate portion between the end portion of the downstream side in the weft inserting direction and the end portion on the upstream side in the weft inserting direction. The reed is formed as a single reed or at least one of a plurality of divided reeds. <IMAGE>
