Abstract (en)

[origin: EP1431497A2] The drive is integrated in the casement or frame and has an actuating arm which pivots when the casement is actuated. The actuating arm has in the region around the output shaft (11) opposing bores for inserting a follower which can be inserted in one of the bores to selectively fix the actuating direction of the drive. The follower disc (13) is formed semi circular to allow symmetrical use of the drive on left and right casements.
