Abstract (en)

[origin: EP1431499A2] The drive includes a secondary drive which with failure of the main drive is triggered by a trigger mechanism. The secondary drive is an elastic element of flat strip like material shaped in cross-section so that its thickness is less than 50% of the width of the strip like elastic element.- Two superposed guide pulleys (39) for the elastic element can be provided on the two outside end areas of the drive.
