Abstract (en)

[origin: EP1273791A2] A sliding valve body (64) has a second throttle opening (122) that discharges into a control area (62) and is sealed when the valve body comes next to a control device (72) and linked to a high-pressure space (20) when the valve body is lifted off. A control opening (82) and a first throttle opening (74) are displaced in relation to each other and interconnected by a throughway (76) limited by the control device and the sliding valve body.
