Abstract (en)
[origin: EP1431655A2] The light has a light body with an inner chamber enclosed by a wall (10) and a light source (4) in the inner chamber and at least one light opening (9) in the wall via which at least one light beam exits from the light source when the light source is turned on. At least one outer body (12) is provided that can be moved on or in the wall of the light body so that the shape and size of the opening can be varied by varying the position of the outer body.
