Abstract (en)  
[origin: WO03013908A1] An external mirror assembly for a motor vehicle with a base (16) and an adjustable mirror head (12) and a pivot and vibration absorption mechanism (14) on the base (16) allowing manual adjustment of the mirror head (12) with respect to the base (16). The pivot and vibration absorption mechanism (14) has a ball joint (22, 26) to enable pivoting and frictionally engaging faces (36, 38, 42) spaced apart from the ball joint (22, 26) on the base (16) and the mirror head (12) to provide vibration absorption. The respective faces (36, 38, 42) are part spherical surfaces resiliently urged together by resilient means (46).
