Abstract (en)  
[origin: WO03022695A1] The invention relates to a method for the production of a transport pallet (20), especially from recyclable paper wrappings, in addition to a transport pallet (20) per se. In order to produce the transport pallet (20) cheaply and to save weight, paper wrappings are preferably used in the construction of the transport pallet (20). According to the inventive method, the paper wrappings are cut into at least two lengths for longitudinal (2,3) and cross strip elements (1), said method also involving the cutting of said paper wrappings in a longitudinal direction. The longitudinal cut cuts the inner diameter of the paper wrappings so that, preferably, two identical paper wrapping segments are created. The remainders of the paper coverings are cut radially to a single length and are used as cleats (5). The cleats can be further processed and the longitudinal and cross-strip elements can be stuck thereto in a positive fit, whereby a light but extremely stable transport pallet (20) is produced.
