Abstract (en)
[origin: WO03031279A1] The invention relates to a novel holder comprising a handle, especially for so-called Tetra(R) drink packagings. The upper edge of said packagings generally comprises two folded tongues which are detachably arranged on the opposing narrow sides of the packaging wall. A rear wall supporting element (10) which is defined in such a way as to be placed on the rear wall of the container is movably connected to a handle (20), said handle being in turn movably connected to a supporting element (3) which is defined in such a way as to be placed on an upper packaging wall. Holding means (11, 12) are provided on the rear wall support (10) in order to fix a closing tongue of a packaging to be held, approximately parallel to the adjacent wall, said tongue being detached from the rear wall of the container. The holder can be folded in a storage position in such a way as to save place, or mounted in a bearing position in a detachable manner, the rear wall supporting element (10) and the upper supporting element (3) co-operating with each other.
[origin: WO03031279A1] The invention relates to a novel holder comprising a handle, especially for so-called Tetra® drink packagings. The upper edge of said packagings generally comprises two folded tongues which are detachably arranged on the opposing narrow sides of the packaging wall. A rear wall supporting element (10) which is defined in such a way as to be placed on the rear wall of the container is movably connected to a handle (20), said handle being in turn movably connected to a supporting element (3) which is defined in such a way as to be placed on an upper packaging wall. Holding means (11, 12) are provided on the rear wall support (10) in order to fix a closing tongue of a packaging to be held, approximately parallel to the adjacent wall, said tongue being detached from the rear wall of the container. The holder can be folded in a storage position in such a way as to save place, or mounted in a bearing position in a detachable manner, the rear wall supporting element (10) and the upper supporting element (3) co-operating with each other.
