Abstract (en)  
[origin: WO03031721A1] The invention concerns a quasi-parallelepiped paving stone, comprising a corresponding base body (21) and, on the four lateral surfaces (25, 26), vertical bead-shaped spacers (22), which are spaced apart from one another by approximately the width of one spacer such that the spacers can be used in an indentation link with the spacers of the neighbouring moulded stones of the same type. Additionally, a number of transverse splined recesses are moulded on a lower surface (24) of the paving stone, ribs being formed between said recesses. Thus a indentation or anchorage is obtained at the base of the set paving stones.
