Abstract (en)
[origin: WO03029592A1] The invention relates to a closing sequence control device (1) for a self-closing door, particularly a fire protection door, comprising a fixed wing and a moveable wing, whereby the moveable wing can be arrested by means of a blocking mechanism that can be disengaged by the fixed wing. The invention is characterized in that the blocking mechanism is provided with a tilting element that prevents the moveable wing from closing when the fixed wing is open.
