Abstract (en)

[origin: FR2829596A1] The method for organization and execution of a number of services, especially in a motor vehicle, whereby a number of formalized utilization cases are defined, for each of which in a context (Ci) a request or command (Di) causes a reaction (Rk) that realizes a particular service. The reaction is selected on detection of the transmission of the command in the context. The invention relates for example to selection of services such as switching on of windscreen wipers, with the context relating to conditions, e.g. rain, both inside and outside the vehicle. A request or command concerns activation of a button or interface device, while a reaction is the activation of the windscreen wiper motor.
