Abstract (en)
[origin: EP1433920A2] Insect-protection device for suspending in the frame of windows or doors comprises a support frame (10) formed by several frame arms (28, 30) connected by corner angles (32) and an insect-protection fabric (12). Suspension brackets (16) protruding from the corner regions of the support frame engage behind a rebate edge of the frame. The suspension brackets are each arranged in a bracket holder (14) displaced beyond the corner angle toward the outer edges of the frame. Preferred Features: The frame arms are extruded profiles, preferably made of aluminum.
