Abstract (en)

[origin: FR2849392A1] The device has a longitudinal positional installation unit on a ski (2) for retaining support fixations within a chosen position. A surface (7) of the ski has a retaining projection extending upwards and engaging a longitudinal aperture realized within a base (10,10) of the fixations. A traversal brooch (11,11) immobilizes the base that includes traversal holes engaging with the locking instrument. An Independent claim is also included for a ski having the retaining projection.
