Abstract (en)
A nightlight with a dynamic image effect comprises a plug (1), a sensor (21), a motor (22), a lower casing (20), an upper casing (23), a rotary seat (41), a lamp tube (43), a rotary transparent cover (44), and a lampshade (45). The rotation of motor (22) rotor will induce a shaft (221) to rotate to drive the rotary seat (41). As a result, the lamp tube (43) and the rotary transparent cover (44) also rotate with the rotation of the shaft (221). Thereby, users may view a dynamic image on the rotary transparent cover (44) periodically. <IMAGE>
