Abstract (en)

[origin: WO03033205A1] The invention relates to a device for machining a lens(1) which is optically active on two sides, comprising a cutting and milling unit (7) and/or a polishing unit (8) used to machine at least a first side of the lens. A re-clamping unit (2) which is used to re-clamp the lens (1) for machining on a second side (1.2) of the lens is also provided.
