Abstract (en)
[origin: WO03022541A1] The present invention concerns a device and a method for forming a mat of preferably adhesive-coated wood fibres on a running forming belt (3). The device comprises at least one dosing bin (1) with at least one bottom belt (2) that transports fibres to one end of the said forming belt (3) and allows the fibres to fall down onto a first region (3a) of this belt, at least one weigh scale (4), at least one forming head (5) and at least one pre-press (7). The said weigh scale (4) is placed under an upper part of the said forming belt (3) and directly after the said first region (3a) in the direction of motion of the forming belt (3), but before the said forming head (5).
