Abstract (en)  
[origin: FR2831370A1] The procedure provides a real-time digital transaction between a user terminal and at least two targets (5a,5b,5c). The dialogue comprises parallel execution of at least two elementary tasks assigned to the dialogue with each of the targets. The procedure provides a real-time digital transaction between a user terminal and at least two targets (5a,5b,5c). It comprises the following stages: firstly reception by a platform (1) of a message (M) transmitted by the user terminal; secondly a dialogue between the platform (1) and the targets (5a,5b,5c) and reception of replies (Ra,Rb, Rc) transmitted by the targets; and thirdly transmission by the platform of at least one of the responses (Ra, Rb0,Rc) to the user terminal. The dialogue comprises parallel execution of at least two elementary tasks assigned to the dialogue with each of the targets. The tasks are configured by the placed on hold, during their operation, in real time, as part of the dialogue with the targets.
