Abstract (en)

[origin: EP1437323A1] The rotation device includes a stator (1) and a rotor (2). There is at least one crown (13) of engagement recesses, i.e. and internal or external gear crown, with recesses round an axis coinciding with that of the rotor, fitted to the stator, or rotor, or both. An engagement element (16) movable between two positions, is fixed to the rotor.
