Abstract (en)

[origin: EP1437449A2] The sealing element (1) for an upright and crossbar construction consisting of similar profiles has a centrally extending assembly slot, two inner higher lying drainage slots, and two vertically offset outer lying anchoring slots. A bridge (8) for sealing of the abutment gusset (7) of post and crossbar engages in the lower lying anchoring slot (6.2) of the post pointing towards the crossbar. Transversely extending extensions (9,10) are formed on the bridge and engage in the higher lying drainage slots (5.1,5.2) of the crossbar.
