Abstract (en)

[origin: EP1437453A2] Toothed belts are the drives for a roller blind, moving within guide rails (5), with their free ends connected to a running slide to carry the blind by a rod between them. Toothed belts are the drives for a roller blind, moving within guide rails (5), with their free ends connected to a running slide to carry the blind by a rod between them. The guide rail has chambers (24-26) which shroud the toothed belts on all sides, with a longitudinal slit (29) for the belt teeth to project through and engage the slides which travel through a channel (28) between the belt levels, with an opening (31) for the blind rod. One end of the rail has a groove profile (32) for its mounting.
