Abstract (en)
[origin: EP1437460A1] The method involves inserting a part of an elongate reinforcing unit/flat plate (14) into a masonry structure (10). The inserted part of the reinforcing unit is secured to each masonry unit e.g. brick, stone block, and breeze block, above the reinforcing unit, using screws. The whole of the reinforcing unit is inserted into the structure. The structure is reinforced above a weakened area or a door/window opening.
