Abstract (en)
[origin: EP1437633A1] The wheel has an intermediate wheel (R_I) and a wheel (R_C) arranged in a way so that radial axes of a tooth (D_{In}) of the wheel (R_I) and tooth (D_{Ck}) of the wheel (R_C) are joined with an axis (AC) passing through respective centers (O_I, O_C) of the wheel, during clutching. Vertices (10_I, 10_C) of respective teeth (D_{In}, D_{Ck}) contact with one another during clutching, and contour of a tooth flank of the tooth D_{In} is oriented. The contour of tooth flanks of the tooth of the wheel (R_I) and the wheel (R_C) are oriented, respectively in a part of the tooth intended to cooperate with a gear teeth of the wheel (R_C) and intermediate wheel (R_I), respectively.
