Abstract (en)
[origin: EP1437635A1] The watch-case has a hinge (22) linking a goggle (24) to a chassis (10) and holding the goggle in closed and open positions, respectively. The goggle covers a case (20) and avoids its shift based on the chassis in closed position. The goggle is moved based on the chassis when it is in open position. A locking unit (46) is arranged to occupy one position in which the goggle is fixed and another position within which the goggle is moved.
