Abstract (en)

The connector has a connector body (10) with coupling holes separated by a preset interval from each other. The holes perforate a side of an upper surface of the body and formed in edges of the body lower end. A power source connecting rod mounted at a side of the body is connected with a fluorescent lamp frame side. A connector cover (20) protects the body and an electric wire cover is mounted in a space part of the body.
