Abstract (en)  
[origin: US7412755B2] Bracelet provided with a foldable clasp, comprising a first arm ( 7 ), at least a second arm ( 8 ) articulated with said first arm, a cover ( 4, 6 ), under which the arms' free extremities are folded back when the clasp is closed. The cover comprises a locking system enabling the arms to be held in a closed position and to be released by acting manually on the locking system to open the clasp. It further comprises a casing ( 4 ) and a base ( 6 ) closing the cover's lower side. The casing comprises solid sides of uneven thickness obtained by detach cutting machining or by molding. The casing's sides define between them and with the base an internal volume ( 45; 95 ) in which the locking system is at least partially accommodated.
