Abstract (en)

[origin: WO03016006A1] The invention relates to a planing cutter having an essentially cylindrical cutter body (1) that has a plurality of recesses (4) arranged in the envelope surface of the cutter body (1). Each recess (4), a cutting edge element (2) and a locking body (3) are arranged. The locking body (3) has a radially outwardly abating width in the preipheral direction. According to the invention, the locking body (3) is provided with at least one radially inwardly faced press-contact surface (13, 14). At least one essentially axially directed wedge (7, 8) is pressed in between the press-contact surface (13, 14) and a support surface (15) in the bottom end of the recess (4).
