Abstract (en)
[origin: US7481390B2] A device for winding film webs, paper webs and similar material webs supplied continuously across guide rollers has a counter roller in a device frame part for supplying the material web. A winding shaft that is rotatable and movably supported in the frame cooperates circumferentially with the counter roller, wherein the winding shaft is provided with a corresponding winding drive for continuous winding of the material web onto a winding sleeve. According to the invention, for supporting the winding shaft a carrier unit is provided that is pivotable about a central transverse axis of the device and receives the winding shaft so that it is linearly movable.
