Abstract (en)

[origin: WO03035581A2] The invention relates to a method for producing shaped explosive substances, especially a propelling charge substrate, such as for example a spheroidal propellant charge powder made of a stabilized explosive substance. Said stabilized explosive substance is first dissolved in a solvent, the stabilized substance is removed from the mixture and particles are shaped from the resulting mixture. The invention further relates to a method for producing a varnish made of a substantially water-free explosive substance.
