Abstract (en)
[origin: WO03036221A1] The invention relates to ammunition that is used for target practice and/or sport shooting with an individual live-fire weapon. The inventive ammunition comprises a cartridge case (1) that defines a receiving chamber for an explosive (5), the transverse dimension (D1) of said chamber being at most of the order of that (D2) of the rear face of the missile (2). Said case (1) is formed from a hollow resin mass. The longitudinal dimension of the chamber (4) is also reduced with positive connection means being inserted between at least any two of the elements (6, 5, 2) which make up the series of elements involved in the chain operation of the ammunition and which are disposed at a distance from one another.
