Abstract (en)  
A drum-type laundry machine of the present invention ensures that a lid (outer lid) thereof can advantageously be opened and closed. <??>An outer lid (31) includes a plurality of bar members (31A) each extending laterally and connected to one another in parallel relation by a flexible member and, hence, is bendable between the respective bar members (31A). The outer lid (31) is slidable with its right and left side edges being fitted along side edges of an opening (4) of a housing (2). <??>Accordingly, there is no possibility that the outer lid (31) of the drum-type laundry machine (1) hits against a faucet projecting from a wall for supplying water into the drum-type laundry machine, even if the drum-type laundry machine is installed with a rear face of the housing (2) thereof fitted along the wall. <IMAGE>
