Abstract (en)

[origin: EP1439278A2] A door opens and closes to the frame on swing hinges and is subsequently lever-lowered into its final locked position, when the lower face of the door is presented to the upper face of the door lower frame. The gap between the two is closed by a height-adjustable rubber seal (1) with a locking screw (6) in a groove forming part of a side-flange (5).
