Abstract (en)

[origin: EP1439282A1] The device has a split annular retaining ring (44) arranged in an annular recess (16) delimited by walls, in which a wall (24) is formed by a flange face (26). A flange (36) has a festoon contour upper end with a recess (29). A base has a festoon contour front edge (62), and an annular groove formed between a notch and a rear flange (64). The groove holds the ring and allows an axial pin mount to penetrate the recess and gap.
