Abstract (en)

[origin: WO03037089A1] The invention relates to a device that is used for the continuous production of sausage-type products comprising a bead which is covered with a skin that is obtained by means of gelation. For this purpose, the inventive device comprises a coextrusion head (1) which delivers into a gelation tub (2). According to the invention, said tub is circular in shape and defines an annular, peripheral channel (20) in which the bead exiting the coextrusion head (1) can be wound into a plurality of coils before leaving the gelation bath. Moreover, means are provided for creating a current in said bath so that the bead is driven continuously at more or less the coextrusion speed.
