Abstract (en)

[origin: WO03037538A1] The invention relates to an ultrasonic cleaning system for cleaning a plurality of parallel extending, strand-like products (4), such as for example wires, profiles and pipes by means of a liquid excited by ultrasound in a bore (3) which is only slightly, that means approximately 50-50 %, larger than the diameter of the product to be cleaned. The cleaning liquid is supplied to the bores (3) in such a manner that it completely fills them.
