Abstract (en)

[origin: WO03033838A1] A method for replacing a building element (A-E) in a wall. The building element (C) to be replaced, as well as the building element (B) thereabove and the building element (D) therebelow, are disengaged from a frame member (1). The building element (C) to be replaced is moved away from the frame member (1), whereby the building element (B) above the one (C) to be replaced and, respectively, the building element (D) therebelow, decline relative to the frame member until the building element (B) above the one (C) to be replaced disengages from the building element (C) to be replaced and is able to decline back to become co-directional with the frame member (1). A replacement of the building element (C) is performed.
