Abstract (en)

[origin: EP1440870A2] Vehicle body comprises at least one connection region between at least one first and one second assembly. At least one flat adapter (13) attached at least to the first assembly (11) in the connection region overlaps the second assembly or a flat adapter attached to the second assembly and is welded in the overlapping region. Preferred Features: The first and the second assembly are made of different materials. At least one assembly is assembled in a first manufacturing process before connection to the other assembly in a second manufacturing process. At least one assembly is a passenger compartment made of an iron material, especially sheet steel, a front vehicle module made of a light metal material, a rear vehicle module, or a front end module. At least one adapter is a sheet steel strip.
