Abstract (en)
[origin: EP1440889A1] The container has two superimposed layers between which free air circulation is allowed. Adjoining bases (8) reach the lateral conditioning walls (2, 3) and are folded against an external face of a bottom (1). The bases are integrated to form local extra-thickness on the bottom with an interval and to lift with respect to an identical conditioning on which it can be brought to rest.
