Abstract (en)
[origin: WO03037578A1] The invention relates to a device for cutting food products, wherein separating sheets can be inserted simultaneously between the cut products. The transport system for delivering the paper web from which the separating sheets are formed comprises a station for transversal perforation of the paper web. The paper web is delivered to the cutting plane in such a way that the transversal perforation is located on the cutting plane during each paper separating operation.
