Abstract (en)  
[origin: WO03039920A1] The invention relates to a wiper system (10) for a window (30) of a motor vehicle comprising a fastening device that does not have any screw connections. Said fastening device has at least three interspaced fastening elements (32, 34, 36). Two (32, 34) of these are situated on a connecting line, and the third (36) is located at a distance from the connecting line. The fastening device additionally comprises corresponding holding devices (39) inside of which the fastening elements (32, 34, 36) can engage. An enlargement (38, 40, 42) for effecting an axial securing is provided at least on a fastening element (32, 34, 36). In order to effect an exact axial positioning, the invention provides that the holding device (39) has a recess (44), which is complimentary to the enlargement (42) and inside of which the enlargement (42) can be held in the manner of a detent connection.
