Abstract (en)

A panel for incorporation in a slat way system assembled from a series of panels in edge-to-edge engagement. Each panel defines at least one horizontally extending slot (8,14) for receiving an article to be supported by the wall system. Each slot comprises a lower portion (1) which extends rearwardly from an opening (2) on one side of the panel and an upper portion (3) which extends upwards from the lower portion behind a downwardly extending portion (4) of the panel. The panel is extruded such that the downwardly extending portion (4) of the panel forms part of a closed box section including a front wall (17) extending upwards from an upper edge of the opening, a lower wall (18) extending rearwardly from a lower edge of the front wall, and a rear wall (20) extending upwardly from a rear edge of the lower wall. The box section can be of rectangular or L-shaped configuration. <IMAGE>
