Abstract (en)
A strapping trolley capable of accomodating reels of strapping of variable width and number comprises a supporting element (12) and at least two fences (20) mounted on the said supporting element (12) and defining a space (22) for receiving at least one reel of strapping (24). At least one of said at least two fences (20) is movable with respect to the other in order to vary the transverse dimension of the said space (22). Means (30) are provided for the relative locking of the said at least two fences (20) and defining a given transverse dimension of said space (22). Also provided is at least one rolling-contact bearing element (38) interposed between the said at least two fences (20). The supporting element (12) extends to define a supporting surface (42) for at least one compressor (44). <IMAGE>
