Abstract (en)
The invention is relating to the combining of the connection pipes by means of spherical parts that enable hot water to enter panel radiator and to circulate in panel radiator. The characteristic of this part is such that it provides a center-connection to the panel radiator, thus, providing an easy assembling from the right and left and consists of two parts, namely, installation upper group and lower group. Therefore, because of the adaptation of hot water pipe to various length and the modular structure of it, when required, the weld assembly can be made providing an easiness in stocking and conveying and, thus, minimizing costs of stocking. <IMAGE>
