Abstract (en)

[origin: WO03041525A1] The invention relates to an accessory, such as a flotation device, shin guard, or other accessory absorbing impact, which is formed from a cut cellular plastic sheet (3) and a support fabric (2). The cellular plastic sheet (3) and the support fabric (2) are attached to each other at the opposite edge area of the accessory or a part of it, or are laminated to each other in a stretched state. The accessory is of such a size in its free state that, when it is put onto its object of use, the accessory is always made to stretch, so that the cuts in the cellular plastic open to make the construction breathable.
