Abstract (en)  
[origin: WO03035998A1] A method for forming a composite wall (1), said method including the steps of: erecting frame (2) including a plurality of generally upright spaced apart studs (3); positioning a plurality of external cladding sheets (4) over the frame in a generally horizontal orientation such that a majority of the cladding sheets extend across two or more of the studs; fastening the sheets (4) to the frame in substantially contiguous abutting relationship to form a generally planar substrate for a wall; and applying a surface render (10, 12) including a reinforcing mesh (11) substantially uniformly over the substrate; thereby to form a structural wall with an external appearance of rendered masonry without the need for supplementary internal rendering, bracing or reinforcement.
