Abstract (en)  
[origin: WO03038764A2] A security device (1) is disclosed, which permits the controlled access of authorised personnel to vulnerable security regions (2). According to the invention, the security device (1) is provided with a bus system (3), connecting a central control device (5) to several actuators (4), each of which is allocated to one of the security regions (2). Access authorisation is monitored and controlled by means of a personal identification device (6).
