Abstract (en)

[origin: DE10149777A1] A semiconductor power circuit breaker (SPCB) (100) has first (102) and second (101) main connections and a control connection (CC) (103). A clamping diode device with first (205a) and second (205b) parts connected in series between the first main connection and the CC clamps on an external voltage (VA) available on the first main connection. A control circuit (403) uses a preset operating condition for the SPCB to control a controllable semiconductor switch (402).
