Abstract (en)

The invention relates to a mounting system for a facing for a building structure. The system comprises brackets (15) which can be mounted to the building structure to be covered and profiles or connecting strips (16) which can be connected to the brackets (15). The brackets (15) have an in a cross section rectangular first compartment which is provided with two ribs (11a,11b), placed perpendicular to it. In a preferred embodiment a rectangular second compartment (18) is made in the ribs, which is much smaller than the first compartment. In the connecting strips (16) pins (17a) are fixed, in such a way that a connecting strip (16) may slide through the bracket (15), where the pins (17a) fixed in the mounting strips (16) slide through the second compartment (18). <IMAGE>
