Abstract (en)

A scroll type compressor includes a fixed scroll member (20) and a movable scroll member (24) to define compression chambers. The movable scroll member orbits relative to the fixed scroll member to compress gas in the compression chambers. The compressed gas is discharged to a discharge port (20d). The compressor also includes a filter chamber (44) and a cooling chamber (32). The filter chamber communicates with the discharge port for accommodating a first filter (55) to at least partially filter the compressed gas. The cooling chamber is located adjacent to the filter chamber for containing coolant fluid that cools the compressed gas in the filter chamber. <IMAGE>
